

Important Instructions on using Bio MPG/Emission Improver Sample Package:

Make sure you know how many miles per gallon and/or miles per tank you are currently getting before using any Bio MPG/Emission Improver.

Follow these important instructions when using the product:

1. Don't ever short- change your tank on the recommended dosage of the product or you will not receive the maximum savings. Also, don't miss using the product in any tank. Remember... it takes 4 consecutive, complete tanks before you receive a savings. If you miss a tank of using the product, then you must start completely over. It takes 4 consecutive, complete tanks... and then it is extremely important to always use the product on every fill up thereafter, so you can keep getting the substantial savings!

Recommended Gas Pill Dosages in gasoline or diesel:

GASOLINE - 1 teaspoon per 15 gallons.

DIESEL - 1 teaspoon per 10 gallons.

2. When using the powder, always put the powder into your tank then fill your tank with fuel, so the powder will disperse throughout your tank quicker. This insures that your powder went down into the tank. For your first 2 tanks of using the powder, it is very important to give your tank a "*Booster Shot*" to boost your system.... Using Two Times (2x) the powder. (If you have already started using the powder, it is still recommended to give your next 2 tanks a (*Booster Shot*."))
 - After your "*Booster Shot*", then use the normal dosage as recommended above. Remember... it's best to always drop the powder into your tank first and then put the fuel in. This insures that your powder went down into the tank. Always use recommended dosage every time you put any amount of fuel into your tank according to the size of your tank as prescribed above. Don't ever short-change your tank on the recommended dosages!
3. Keep a close record of your miles per gallon or miles per tank usage when you begin using your dosage of Bio MPG/Emission Improver. Don't depend on the computer in your car to give correct calculations, please calculate the miles per gallon by hand. This is very important to get the correct percentage of savings. You can save up to 25% or more using Bio MPG/Emission Improver.
4. It takes 4 consecutive, complete tanks to start getting results.
5. Keep the powder in a cool place at room temperature. They should be kept in a fresh place, out of the sunlight, and in an airtight container, since direct sunlight will activate the enzymes and the air will spread their intense aroma.
6. Very Important: Don't miss putting the powder or powder in any tank or it will prolong you receiving a savings. You must continually use the product in every tank to keep getting a savings. Remember... it takes 4 consecutive, complete tanks before you start getting results.

Instructions:

1. Create one chart for each vehicle.
2. To create a reference point it is best to calculate the current mileage of your vehicle before using the BioPerformance pill.
3. Record your mileage at the point of filling up.
4. Record your mileage at the next fill-up.
5. Record the difference as distance traveled by taking Ending Mileage minus Beginning Mileage = Distance Traveled.
6. Record the number of gallons used.
7. Divide Distance Traveled by the # of Gallons used = MPG.
8. Send us your testimonial.
